- * Perform task estimation, task delegation and task management.
- * Client focal point for technical communication.
- * Client and management focal point for project status reporting.
- * Creates and maintains the project task sheet to track performance.
- * Identifying and managing changes in project scope.
- * Ensures quality of the project by adherence to design, document and code reviews.
- * Weekly time and expense review and approval.
- * Gain milestone and final project acceptance from customer.
- * Notification of milestone completion for invoicing.
- * Keeps management informed of all project related issues that can impede progress or jeopardize project delivery.

QUALIFICATIONS

- * Demonstrated experience in managing software development and integration projects
- * Proven track record in supervising teams of software developers and integrators
- * Excellent verbal/written communications skills and customer skills
- * Professional, accountable, reliable, driven, team player
- * BS Degree is required (Computer Science, Software Engineering or related degree)
- * 10+ Years of work experience in IT positions, with at least 5 years experience managing software projects and technical teams
- * Must have hands-on experience developing software
- * Must be willing to travel 25% of the time
